

ABSTRACT

[Object] This invention make not only makes it possible do away with discrepancies in the set prices of repair parts, but also makes it possible to reduce the time for completely setting the selling prices for the repair parts, and makes it possible to simply set the prices for repair parts even for a new person in charge.

[Means to Solve] A price-setting-management apparatus for repair parts 20 registers repair parts for which prices have been set in the parts DB (database) 40 as real-registration data according to the contents of an instruction from a terminal 10 that selects price-table price setting, similar-part price setting or cost-information price setting, registers repair parts for which the price has not been set in the price-setting-method-log-management DB (database) 50 as temporary data, and when repair parts that were not determined to have a profit are evaluated and set, further designates the temporary-registration data as real-registration data.
